

Beneficiary & secondment venue for the first 2 months of the outgoing phase	
INSTITUT NATIONAL DE RECHERCHE EN INFORMATIQUE ET AUTOMATIQUE + INRIA + France	
General description: Established in 1967, Inria is a French public research institute dedicated to the entire spectrum of computational sciences, producing outstanding research with strong economic and societal impact (more than 200 companies have stemmed from Inria). The institute's strength is its ability to develop a culture of scientific innovation and stimulate creativity in digital research (more than 70 ERC grants since 2007, #1 European institute in the area of digital technology). Inria was awarded the European Union's HRS4R label in 2019, recognising its commitment to provide the best environment for its researchers. The Inria Grenoble center was created in 1992 and currently hosts a workforce more than 600 people, including 230 PhD students and Post-Docs. STATIFY is a joint team of Inria and Laboratoire Jean Kuntzmann, a joint research unit of the CNRS, Institut National Polytechnique de Grenoble (G-INP) and UGA. The team is composed of nine permanent members, thirteen PhD students and one post-doc. The team is engaged in several international collaborations and has developed strong ties with the industry such as EDF, Valeo or Criteo. The team also transferred its knowledge through the spin-off start-up Pixyl.	
Role and profile of supervisor	Stéphane Girard (RS) is Research Director (1st grade, DR1) in the STATIFY team and, from 2018, part-time associate researcher at Ecole Polytechnique. He is/was associate editor of internationally recognized scientific journals. He is a specialist of extreme-value theory (EVT) and high-dimensional statistics. Stéphane Girard published more than 120 research papers in top-ranked journals including <i>Annals of Statistics</i>, <i>Journal of Machine Learning Research</i>, <i>Bernoulli</i>, <i>JRSS-B</i>, with 5000+ citations and h-index 40 from google scholar. The RS will provide the academic secondment to the PF. During this two month period, the PF will be trained on EVT. This will be a training-through-research period working on the first objective of the SUMEXT project. The RS will also integrate the PF to the scientific meetings of the team and favouring new collaborations with members of this team and other teams of Inria and UGA.
Key research facilities, Infrastructure and Equipment	The PF will have a desk, a whiteboard, an internet connection and access to scientific papers from all major publishers. The PF will have access to the means of calculations available at Inria such as JeanZay and Plafrim.
Previous and current involvement in EU funded research and training programmes, actions, projects	• MedUp (ANR, 2008-2011, 834 524 euros, 36 Mois): "Forecast and projection in climate scenario of Mediterranean intense events: Uncertainties and Propagation on environment" and deals with the quantification and identification of sources of uncertainties associated with the forecast and climate projection for Mediterranean high-impact weather events. involves Météo-France and several universities (Paris VI, Grenoble I and Toulouse III). • THE RISK PROJECT (IDEX, 2018-2021): The Risk project's goal is to develop cross-disciplinary research and scientific innovation in the field of disaster and risk management, specifically in areas that are made vulnerable due to a strong interdependency between human, natural or technological hazards. Specific vulnerable territories: Grenoble, Beirut area, Port-au-Prince, and areas in Peru and in Nepal. The project also aims at proposing a risk institute within UGA. The project federates a hundred researchers. • Data@UGA (IDEX, 2017-2020): Data change science & society. Three fields of research: data science to spatial and environmental sciences, biology, health sciences; data-driven research in Social Sciences and Humanities; studies about data security and privacy of data. In collaboration with Inria Team Necs and Gipsa-lab and with IPAG and Univ. Paris Sud Orsay. 8 keuros was awarded to the team from the IRS call for a research project dedicated to extreme and Bayesian statistics. • CloHe (CNRS Defi Mastodons, 2015-2017): "Classification of Heterogeneous Data with Missing Values Applied to Satellite Data Processing in Landscape Ecology and Mapping". Linked to the current project since it relates to satellites data (spatially structured data) with missing values. • HUMAVIPS (FP7-ICT, European STREP project, 2010-2013, 2.62M€): Humanoids with auditory and visual abilities in populated spaces. The goal is to develop humanoid robots with integrated audio-visual perception systems and social skills, capable of handling multi-party conversations and interactions with people in realtime. The partners involved are team Perception and STATIFY from Inria Rhone-alpes (coord.), the Czech Technical University (CTU), Aldebaran Robotics ALD France, IDIAP research institute in Switzerland and Bielefeld University (BIU) in Germany.
